Computer Science 571 2nd Exam
Prof. Papa
Tuesday, December 3, 2015, 6:00pm – 7:20pm

Name: Student ID Number:

1. This is a closed book exam.
2. Please answer all questions on the test

JavaScript/JSONP Questions [20 pts]

Consider the following <script> tag which includes a src attribute referring to a Google spreadsheet (using Google Drive):

```html
```

Google Drive (aka Docs) will return the following JSONP:

```json
listTasks({"version":"1.0","encoding":"UTF-8",
"feed":{"xmlns":"http://www.w3.org/2005/Atom",
"xmlns$openSearch":"http://a9.com/-/spec/opensearchrss/1.0/",
"xmlns$gsx":"http://schemas.google.com/spreadsheets/2006/extended",
"id":{"$t":"https://spreadsheets.google.com/feeds/list/o03712292828507838454.2635427448373779250/od6/public/basic"},
"updated":{"$t":"2006-12-05T10:35:42.800Z"},
"category":[{"scheme":"http://schemas.google.com/spreadsheets/2006"}],
"term":"http://schemas.google.com/spreadsheets/2006#list"},"title":{"type":"text","$t":"Sheet1"},
"link":[{"rel":"alternate","type":"text/html",
"href":"https://spreadsheets.google.com/pub?key\u003do03712292828507838454.2635427448373779250"},
{"rel":"http://schemas.google.com/g/2005#feed","type":"application/atom+xml",
"author":[{"name":{"$t":"pamela.fox"},"email":{"$t":"pamela.fox@gmail.com"}}],
"openSearch$totalResults":{"$t":2},
"openSearch$startIndex":{"$t":1},
"entry":[{"id":{"$t":"https://spreadsheets.google.com/feeds/list/o03712292828507838454.2635427448373779250/od6/public/basic?alt=json-in-script&callback=listTasks"},
"updated":{"$t":"2006-12-05T10:35:42.800Z"},
"category":[{"scheme":"http://schemas.google.com/spreadsheets/2006"}],
```

[Continue with more JSONP content]
In your JavaScript, you have the following code:

```javascript
function listTasks(root) {
  var feed = root.feed;
  var html = ['', ''];
  html.push('<ul>');</
  for (var i = 0; i < feed.entry.length; ++i) {
    var entry = feed.entry[i];
    var title = entry.title.$t;
    var content = entry.content.$t;
    html.push('<li>', title, ' (', content, ')</li>');
    var u = entry.updated.$t;
    html.push('<li>', u, '</li>');
  }
  html.push('</ul>');
  document.getElementById("agenda").innerHTML = html.join('');
}
```

Q1: What is the “output” produced by such a function?

A1: (partial credit will be provided)

```html
<ul>
  <li>My super great JSONP example (status: Done)</li>
  <li>2006-12-05T10:35:42.800Z</li>
  <li>Do JSON project for class (status: NotStarted)</li>
  <li>2006-12-05T10:35:42.800Z</li>
</ul>
```

each of the 4 <li> lines is 4 points, each of the <ul>, </ul> lines is 2 points each.

Web Security Questions [10 pts]
Each question is worth 2 points.

Q1: What are common ways that websites get infected?

A1:
[X] SQL Injection attacks
[X] XSP Scripting attacks
[X] Search Engine result redirection
[X] Using social networking sites to infect users
[X] Attacks on back end virtual hosting companies
[ ] ALL OF THE ABOVE

Q2: Give one example of “weak” password recovery validation

A2:

Any one of these:
1) Information Verification: Asking the user to supply their email address along with their phone number. Note that these are both publicly available.

2) Password Hints: Many users have a tendency to embed the password in the hint itself.

3) Secret Question + Answer: Something like “In which city were you born?” for a password recovery system is easily circumventable today because most of the information is public due to social networking sites.

Q3: What is a JSON array vulnerable to?

A3: JavaScript Hijacking

Q4: Name two techniques used to bypass the same-origin policy.

A4:

Any one of these:
1) JSON and the Dynamic Script Tag
2) JSONP
3) AJAX Proxy
4) Browser Extensions and plugins
5) CORS

Q5: What used to be the problem of Domain Keys Identified Mail (DKIM) as implemented by Google Mail?
A5: DKIM keys were too short and could be factored in 24 hours using a notebook.

HTML5 Questions [10 pts]

Each question is worth 2 points.

Q1: In a <canvas> element what is the purpose of the “id” attribute?
A1: to obtain the “drawing context” using getContext()

Q2: Which of the following are new elements in HTML5?

[X] article
[X] aside
[ ] applet
[X] header
[ ] column
[X] nav
[ ] ALL OF THE ABOVE

Q3: Which of the following are removed elements in HTML5?

A3:
[X] center
[X] font
[ ] footer
[X] applet
[ ] time
[X] frameset
[ ] ALL OF THE ABOVE

Q4: Name three new elements requested by newspaper publishers?

A4: Any 3 of header, footer, nav, article, section, aside.

Q5: What is the required attribute of the <video> element in HTML5, when the video is in a single format?

A5: src

Web Performance Questions [10 pts]

Each question is worth 2 points.
Q1: What Rule is this code an example of?

uF(this.L,this.Q,new G(b[a].x,b[a].y));var c,d,e,f=$L(this,a),g=aM(this,a);e=b=c=d=0;

A1: Minification or Obfuscation of JavaScript

Q2: Why are CSS Expressions to be avoided?

A2: Because they may execute many times, on mouse clicks, keyboard presses, etc.

Q3: Why using a large number of hostnames in a web page is not good for performance?

A3: Because each hostname may involve a time consuming DNS lookup

Q4: When is the use of ETags not recommended?

A4: When using “farms” of UNIX servers.

Q5: What is the interaction between favicon.ico and cookies and how do you optimize it?

A5: Each time the browser request this file, the root cookies are sent, so they should be small

JSON Questions [10 pts]

All questions are worth 2 points.

Q1: What is the MIME type for JSON?

A1: application/json

Q2: Consider the following script:

<script type="text/javascript">
  eval("x=10;y=20;document.write(x*y")
); document.write("<br />")
; document.write(eval("2+2");
); document.write("<br />");
  var x=10;
  document.write(eval(x+17));
  document.write("<br />");
</script>

What is the output that gets produced?
Q3: What is a JSON “object”?

A3: A collection of key:value pairs, comma-separated and enclosed in curly brackets

Q4: When should you use arrays when modeling your data in JSON?

A4: When key names are sequential integers.

Q5: What is the following code?

```javascript
// Constructor -- pass a REST request URL to the constructor
function JSONscriptRequest(fullUrl) {
  // REST request path
  this.fullUrl = fullUrl;
  // Keep IE from caching requests
  this.noCacheIE = '&noCacheIE=' + (new Date()).getTime();
  // Get the DOM location to put the script tag
  this.headLoc = document.getElementsByTagName("head").item(0);
  // Generate a unique script tag id
  this.scriptId = 'JscriptId' +
  JSONscriptRequest.scriptCounter++; }
// Static script ID counter
JSONscriptRequest.scriptCounter = 1;
// buildScriptTag method
JSONscriptRequest.prototype.buildScriptTag = function () {
  // Create the script tag
  this.scriptObj = document.createElement("script");
  // Add script object attributes
  this.scriptObj.setAttribute("type", "text/javascript");
  this.scriptObj.setAttribute("charset", "utf-8");
  this.scriptObj.setAttribute("src", this.fullUrl +
  this.noCacheIE);
  this.scriptObj.setAttribute("id", this.scriptId); }
// removeScriptTag method
JSONscriptRequest.prototype.removeScriptTag = function () {
  // Destroy the script tag
  this.headLoc.removeChild(this.scriptObj); }
// addScriptTag method
JSONscriptRequest.prototype.addScriptTag = function () {
  // Create the script tag
```
A5: Source code from the Dynamic Script Tag “Hack.”

AJAX Questions [10 pts]

All questions are worth 2 points

Q1: Of the URLs below, which have the same origin?

c. https://www.ajaxbook.com
d. http://ajaxbook.com

A1: a and e –OR– “none” (depending on the browser)

Q2: Which of the following are common characteristics of AJAX applications?

A2:

[X] They allow for smooth, continuous interaction
[X] May provide "Live" content
[X] May have visual effects
[X] May include animations and dynamic icons
[ ] May include Google Map widgets
[X] May include custom selectors and buttons
[X] May use drag-and-drop
[X] May implement double-click
[ ] ALL OF THE ABOVE

Q3: What is returned by the getAllResponseHeaders() method of the XMLHttpRequest() object?

A3: A “string” containing a complete set of HTTP response headers

Q4: What are two very common values of the “status” property of the XMLHttpRequest() object?

A4: 400, 404 and 200

Q5: What is a common way to work around the cross-domain restriction of XMLHttpRequest()?

A5: Use a proxy –OR– CORS
Cookies and Privacy Questions [10 pts]

Q1: Complete the PHP code to set a cookie with name “username2” and value “Barney rubble”, and expiring in an hour:

```php
<?php
setcookie("username2", "Barney rubble", time()+3600);
?>
<a href="viewcookie.php">Click here to view the cookie</a><br/><br/>
```

Q2: Complete the PHP code to view the value of a cookie named “username2”. Ensure that the cookie exists.

```php
if( isset($_COOKIE["username2"])) {
    echo "The new cookie \<b>username2</b> contains the value " .
$_COOKIE["username2"];
}
```

JQuery Questions [10 pts]

Q1: (2 points) What is the JQuery code that corresponds to the following?

```javascript
var myButton = document.getElementById("myButton");

A1: $('"#myButton")
```

Q2: (2 points) What are three examples of JQuery “basic” selectors?

A2: Any 3 of All, Class, Element, ID and Multiple.

Q3: [This question is worth 6 points] Consider the following example without Jquery:

```javascript
hex=255; // Initial color value.
function fadetext() {
    if(hex>0) { //If color is not black yet
        hex -= 11; // increase color darkness
        document.getElementById("sample").style.color=rgb("+hex","+hex","+hex")" ;
        setTimeout("fadetext()",20); }
    else  hex=255; //reset hex value
}
```

A3: Rewrite it using JQuery. Assume fadeText is the id of the button.

```javascript
(function() { // when document is ready
    $('"#fadeText") .click(function() { // set a onClick handler on fadeText
        $('"#sample") .fadeOut(125) .delay().fadeIn(125);
        // fadeOut the sample for 125 ms, delay, then fadeIn for 125 ms
```

Lynda.com & Guest Questions [10 pts]

Each question is worth 1 point.

Q1: Cookies can be stolen in two major ways. Mention two of them.

A1: (1) using XSS attach and (2) sniffing network traffic

Q2: How can you avoid having cookies stolen using document.cookie? Mention one avoidance methodology.

A2: (1) Use HttpOnly cookies (i.e., use server-based cookies), (b) use Secure cookies (HTTPS only)

Q3: Why session hijacking is worse than cookie theft?

A3: Because sessionsID usually contain your logged in status and can be used to assume your identity.

Q4: In what kind of design would you use the following meta tag?

A4: In “responsive” design

Q5: What is screen density?

A5: The number of (hardware) pixels within a physical area of the screen, like 256ppi (pixels per inch)

Q6: What is a reference pixel?

A6: Also know as “CSS pixel”, it is a unit a measurement that establishes an optical standard for the length of a pixel, independent of hardware pixels. Referenced in the W3C standard for CSS.

Q7: How can you make issues with scaling factors of images go away? Name one such methodology.

A7: (a) Use SVG (resolution-independent vector graphics) or (2) CSS

Q8: When would you use the “uncompressed” version go jQuery?

A8: During development
Q9: If you were using jQuery for 1 (one) single thing, what would you use and why?
A9: jQuery AJAX functions, because allows AJAX code to be browser independent.

Q10: What is the major difference between “waterfall” and “scrum” development?
A10: sequential (waterfall) vs iterative (scrum / agile)
